

# EXPERIMENT - 6: MEAN, MEDIAN, MODE

## AIM:

To write/prove the R program for mean, median, mode using RStudio.

## PROGRAM:

```
names <- c("siri", "mahi", "chiru")
age <- c(23, 24, 25)
marks <- c(88, 78, 25)
df <- data.frame(names, age, marks)

mean(df$age)
median(df$age)
mode(df$age)
write.csv(df, "datafr.csv")
```

## OUTPUT:

**RESULT:** Thus the program for mean, median and mode was executed successfully.

# EXPERIMENT - 7: SUMMARY

## AIM:

To write/prove the R program for summary using RStudio.

## PROGRAM:

```
names <- c("siri", "mahi", "chiru")
age <- c(23, 24, 25)
marks <- c(88, 78, 25)
df <- data.frame(names, age, marks)

summary(df$age)
write.csv(df, "datafr.csv")
```

## OUTPUT:

**RESULT:** Thus the program to compute summary statistics was executed successfully.

# EXPERIMENT - 8: GREATEST AMONG THREE NUMBERS

## AIM:

To write/prove the R program for greatest among three numbers using RStudio.

## PROGRAM:

```
x <- as.integer(readline(prompt = "Enter first number :"))
y <- as.integer(readline(prompt = "Enter second number :"))
z <- as.integer(readline(prompt = "Enter third number :"))

if (x > y && x > z) {
  print(paste("Greatest is :", x))
} else if (y > z) {
  print(paste("Greatest is :", y))
} else {
  print(paste("Greatest is :", z))
}
```

## OUTPUT:

**RESULT:** Thus the program to find the greatest among three numbers was executed successfully.

# EXPERIMENT - 9:INTER-QUARTILE RANGE (IQR)

## AIM:

To write/prove the R program for inter-quartile range (iqr) using RStudio.

## PROGRAM:

```
names <- c("siri", "mahi", "chiru")
age <- c(23, 24, 25)
marks <- c(88, 78, 25)
df <- data.frame(names, age, marks)

IQR(df$age)
write.csv(df, "datafr.csv")
```

## OUTPUT:

**RESULT:** Thus the program for central tendency and data dispersion (IQR) was executed successfully.

# EXPERIMENT - 10: QUANTILE

## AIM:

To write/prove the R program for quantile using RStudio.

## PROGRAM:

```
names <- c("siri", "mahi", "chiru")
age <- c(23, 24, 25)
marks <- c(88, 78, 25)
df <- data.frame(names, age, marks)

quantile(df$age)
write.csv(df, "datafr.csv")
```

## OUTPUT:

```
1 names <- c("siri", "mahi", "chiru")
2 age <- c(23, 24, 25)
3 marks <- c(88, 78, 25)
4 df <- data.frame(names, age, marks)
5
6
7 quantile(df$age)
8
9 write.csv(df, "datafr.csv")
10
11
12
```

Console Output:

```
> source('image_script.R')
[1] 1
> quantile(df$age)
0%      23
25% 23.5 24.0
75% 24.0 24.5
100% 25.0 25.0
> |
```
