Reg no.,: 192511097

Course : CSA1606 - DATA WAREHOUSING AND DATA MINING

Activity-Application Building with KNIME (any 2)

Activity 1: Sales Analysis Dashboard

Problem Statement

A retail company wants to analyze its monthly sales.

Task

Build a KNIME workflow that:

- Imports a sales dataset.
- Cleans missing values.
- Calculates monthly sales.
- Identifies the top 10 products.
- Creates bar and line charts.
- Generates a summary report.

Expected Outcome:

An interactive sales analysis workflow.

Activity 10: Attendance Monitoring System

Problem Statement

Analyze attendance records to identify students with low attendance.

Task

Build a workflow that:

- Imports attendance data.
- Calculates attendance percentages.
- Flags students below the attendance threshold.
- Generates a report.

The screenshot shows the KNIME Analytics Platform interface. The workflow consists of the following nodes: CSV Reader, Missing Value, Math Formula, Rule Engine, Sorter, and Excel Writer. The Sorter node is configured with the following settings:

- Criterion 1: Column (Attendance_Percentage)
- Order: Descending

The bottom panel displays a sorted table with 5 rows and 6 columns. The table is titled "1: Sorted Table" and shows the following data:

#	RowID	StudentID	Name	TotalClasses	AttendedClasses	Attendance_Percentage	Status
1	Row3	104	David	100	55	55	Low Attendance
2	Row1	102	Bob	100	68	68	Low Attendance
3	Row2	103	Charlie	100	80	80	Eligible
4	Row4	105	Eva	100	88	88	Eligible
5	Row0	101	Alice	100	92	92	Eligible
